

The Facts About Drone Flights in Canada

Ron Treleaven

Transport Canada

Drone Pilot Association of Canada

I am flying my drone in full compliance with Canadian Aviation Regulations. My drones are registered with Transport Canada as required and I hold an appropriate pilot certification, issued by Transport Canada. I am also a member of the Drone Pilot Association of Canada and have records of pilot certificate recency requirements.

24 months: 901.56(1)(b)(iii) or 901.65(1)(b)(iii) in the *Canadian Aviation Regulations* (CARs).

Before take-off the following points were considered

- ☒ Category of Airspace
- ☒ Environmental Conditions
- ☒ Potential Ground Hazards
- ☒ Proximity to People
- ☒ Serviceability of my Drone and its controls

I have considered and obtained any necessary authorizations to operate my drone in this area, including permission, when necessary, from Air Traffic Services (Nav Canada) and, in the case of restricted airspace (Class F), the designated authority. If you have questions, or wish to express concern

Please wait until the drone has landed before talking to me

This will ensure that I give my full attention to flying safely. If you are still concerned after we speak, you can make a written report to Transport Canada using the link provided below to an incident report form.

Note:

Drones weighing less than 250g do not need to be registered with Transport Canada and the pilot does not need to be certified.
